TTC ECO - Small and Medium Size Dry Coolers

High Performance – Low Noise – Fast delivery

TTC Norge is a modern and competitive company within heat exchanger technology. The Norwegian production unit was established 1966 and we are one of few producers in Scandinavia with a complete range of air to liquid heat exchangers.

Our new range of small and medium size coolers include properties, which are essential to a particular customer. You are welcome to contact our sales department for an offer.

Cost-Effective Design

These dry air liquid coolers are optimized for projects with low cooling effect and low liquid flow. Design and utilization of materials are improved to the smallest detail to give the high cost-effective design.

Low noise fan, still effective!

The cooler include EC - or AC fans. If you choose EC, you will get a reduction of power consumption and a speed control function is included. Coolers with Ziehl ZAPLUS fans have less noise and better performance. You may also ask for Ziehl controls with temperature- or pressure sensors.

Low weight - Few parts - Quick supply

One of the main advantages of this model is the simplification of its construction. This was possible with the design of small and medium size capacities. We have managed to reduce the weight and the time of production. The production method do not harm the galvanized surface. Alternatively, the cooler can be supplied in a painted version as shown above.

Other heat exchanger products from TTC Norge AS

Steam- and hot water coils, cleanable coils, electric coils, air cooled condensers and dry air liquid coolers

We have produced custom design heat exchangers since 1967
